Sharp AQUOS BOARD Interactive Display Systems — Smooth, Intuitive and Made for Sharing

AQUOS BOARD®

The Sharp AQUOS BOARD PN-L703B/603B interactive display systems are designed for smooth and effortless communication in a wide range of contexts. Their highly responsive touch pens allow several people to write on the same screen at the same time. And SHARP Display Connect software enables multifaceted wireless communication. Whether in the boardroom or the classroom, Sharp changes the way you communicate.

● Simple, Intuitive Operation Lets You Focus on Interacting

Simultaneous Writing

Recognizing up to 10 points of contact, the PN-L703B and PN-L603B multi-touch LCD monitors allow up to four people to write on the screen at the same time using touch pens or fingers. Participants can take an active part in meetings, brainstorming sessions, classroom interactions, and more. Discussions and presentations become platforms for effective and lively exchanges of opinions.

User-Friendly Pen Software Interface

Using a touch pen, you can easily launch and display the Pen Software user interface—a menu comprising smartly arranged icons that provide easy access to pen settings and functions. Each touch pen has its own dedicated menu, which can be displayed even when up to four people are writing on the screen at the same time. Pen settings such as color and line thickness can be set for each touch pen (with function buttons).

Smooth, Highly Responsive Touch Pen

The dedicated touch pen with function buttons[1] is so smooth and light that using it is like writing on paper. A pressure sensor at the tip of this slim and lightweight pen lets you write with high precision and with an effortless and uninterrupted flow.

Handwriting Recognition

These LCD monitors feature a handwriting recognition[3] function for converting selected onscreen handwriting into standard text. This convenient function allows you to utilize onscreen content to make neat and legible minutes of your meetings.

3 Works with languages supported by Pen Software.

Work Smarter with SHARP Display Connect

SHARP Display Connect[4] software supports effective and multifaceted communication. Onscreen content—including handwritten notes and drawings made in real time—can be viewed simultaneously on the AQUOS BOARD display and mobile devices[5] such as PCs, tablets, and smartphones. SHARP Display Connect facilitates interactive presentations, lively discussions, and paperless meetings in both business and educational settings.

Minimize Glare and Fingerprints

Protecting the screen is an anti-glare film that helps work to reduce glare and reflections and minimize fingerprint soiling on the glass.

MFP Connectivity

Documents and images scanned from a color-scan-capable Sharp MFP can be imported directly to the Sharp Pen Software for display on the AQUOS BOARD system. For added convenience, image data shown onscreen—including notations—can be saved to a PC or sent directly to an MFP for printout.

Front-Mounted Speakers

Two speakers (10W + 10W) are mounted low on the front of the LCD monitor to deliver clearer sound.

A Wealth of Input/Output Terminals

The PN-703B and PN-603B interactive displays come standard-equipped with a wealth of input/output terminals—on the side and the bottom of the monitor—to enable easy connection with a wide variety of equipment. This array of terminals includes three HDMI ports, two D-sub ports, two DisplayPort™ terminals (one input, one output), and two touchscreen-supporting USB ports. One of the USB ports can be assigned to a regularly connected PC, such as a host PC used to operate the LCD monitor. The other USB port facilitates temporary connection to another PC, such as one used by a meeting participant. This allows easy PC connection without the need to switch the USB cable.

■ SHARP Display Connect enables the following interactive functions on the AQUOS BOARD display and mobile devices connected via wireless LAN:
- sharing of onscreen content
- transfer of files
- interactive onscreen writing and drawing
- remote control of the AQUOS BOARD display from mobile devices

■ Up to 50 mobile devices can be connected simultaneously.

■ Files can be exchanged between mobile devices even if they are not connected to the AQUOS BOARD display.

■ Users can capture onscreen images and save them on their mobile devices to make personally annotated memos (personal memo).

■ SHARP Display Connect also connects two AQUOS BOARD interactive display systems on the same network (intranet, VPN, etc.) to enable larger-scale interactive communications.

1 UV²A stands for Ultraviolet-induced Multi-domain Vertical Alignment, a photo-alignment technology that ensures uniform alignment of liquid crystal molecules. 2 Brightness depends on input mode and other picture settings. Brightness level will decrease slightly over the lifetime of the product. Due to the physical limitations of the equipment, it is not possible to maintain a precisely constant level of brightness. 3 Including AG film on the front and AR film on the back. 4 Approximate distance at which the glass panel can withstand the impact of a 500-gram iron ball dropped on its center. 5 Use a commercially available connection cable for PC and other video connections. 6 Analog PC, video, and component video are switchable (on bottom interface); use the menu to select. Video and component video connections require conversion cable via mini D-sub 15-pin jack. 7 RS-232C connection requires an optional 3'rd party DB9 Male to 3.5mm Male conversion cable. 8 For connecting keyboard, mouse, and USB memory device.
